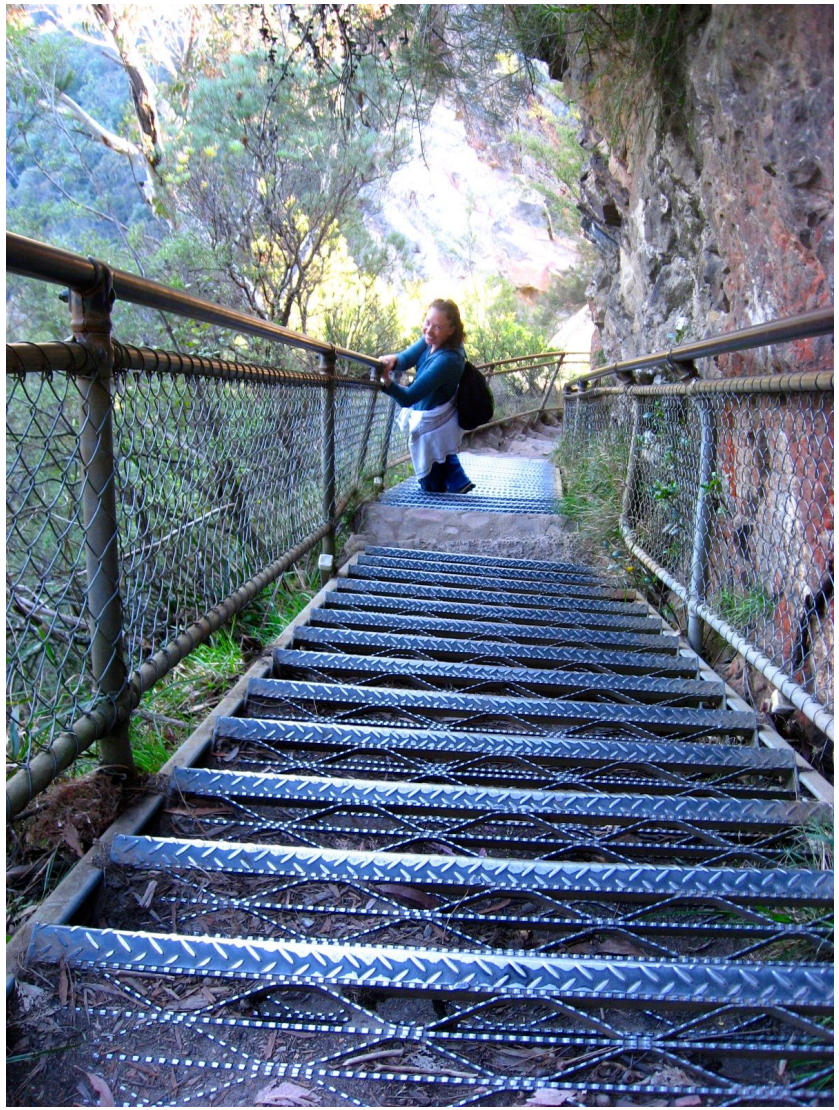
Arizona MIECHV Benchmark Report:

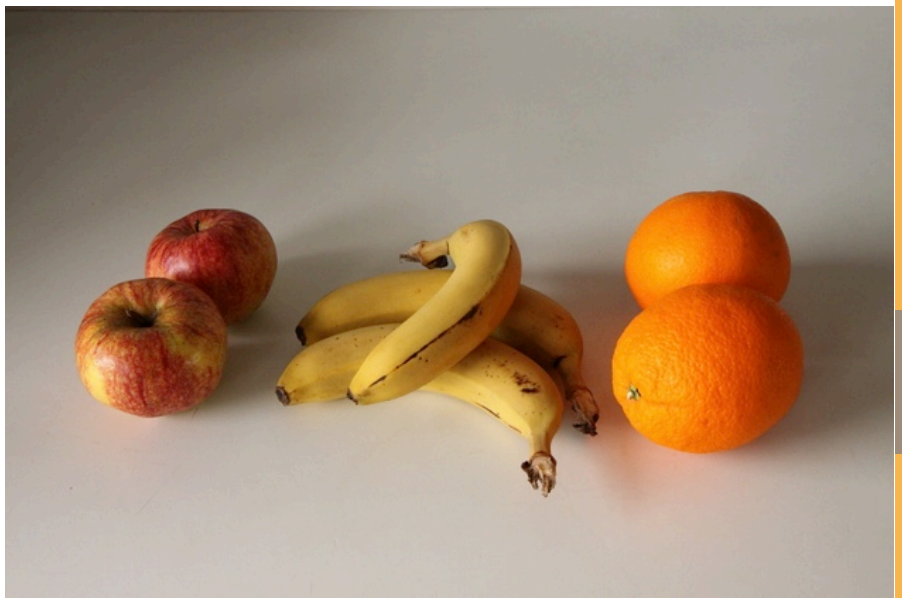
Strengths and Challenges in Defining Common Performance Measures

Presentation by Samantha Martin, PhD

A little about me…



Common Measures: Strengths and Challenges



MIECHV Background

Arizona Department of Health Services

HEALTHY FAMILIES ARIZONA

Johns Hopkins Center for American Indian Health

family SPIRIT®

Promoting Maternal and Early Child Health

Nurse-Family Partnership

Helping First-Time Parents Succeed®

Parents as Teachers™

MIECHV Benchmark Areas

Improved Health and Development

Child Injury, Abuse, Neglect, Maltreatment, & Emergency Room Visits

School Readiness

Domestic Violence

Economic Self-Sufficiency

Referrals

MIECHV Performance Measures

- Prenatal Care
- Preconception Care
- Birth Spacing
- Depression Screening
- Breastfeeding
- Well-Child Visits
- Health Insurance Status
- Domestic Violence
- ER Visits
- Child Safety
- Suspected & Substantiated Maltreatment
- Parent/Child Relationship
- Developmental Screenings

Defining Performance Measures

Screenings

Depression

Photo from the2x2project.org

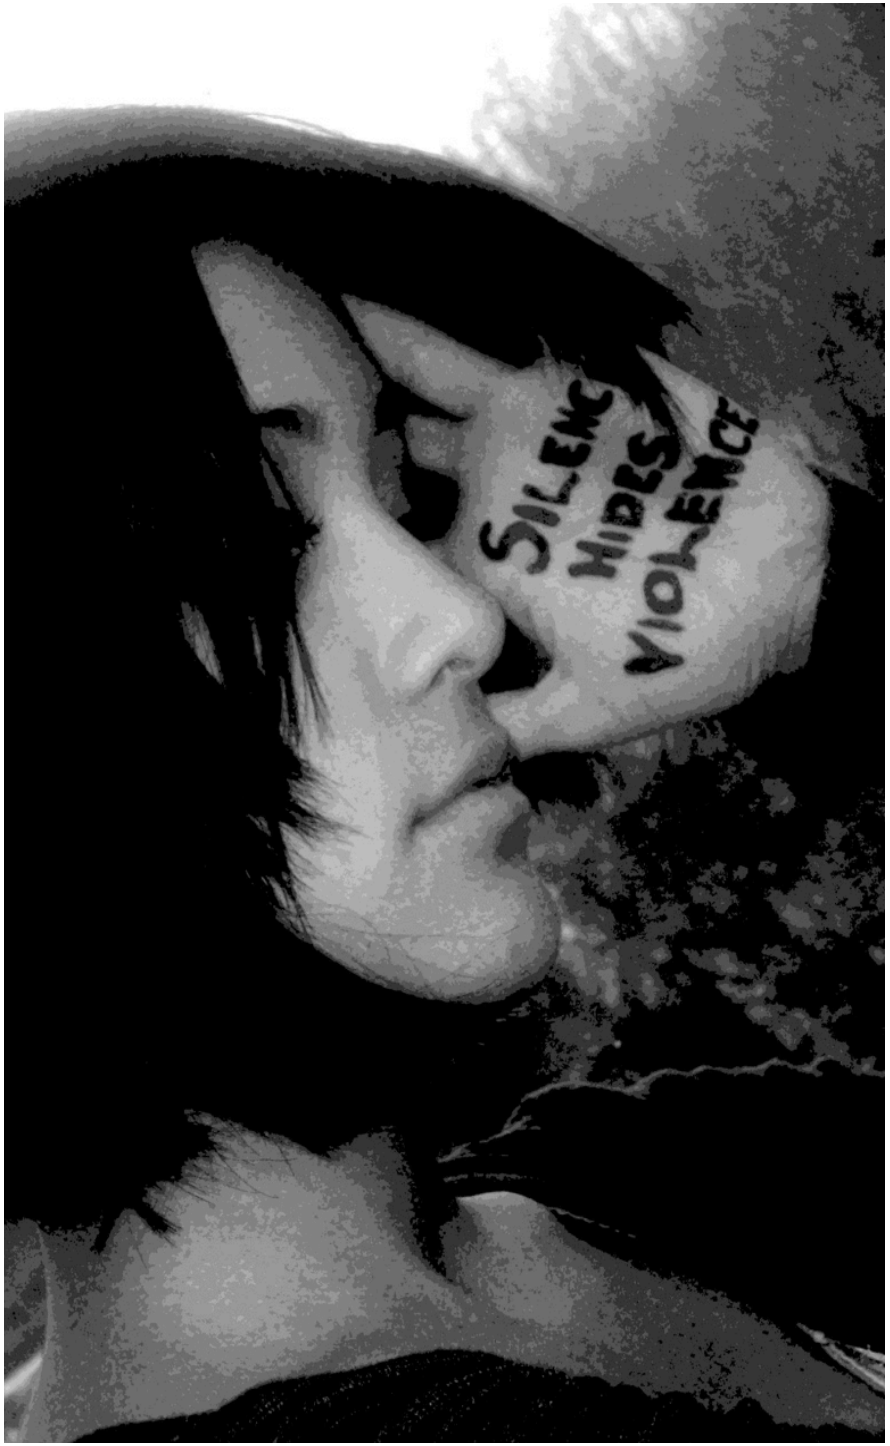
Increase or maintain the percentage of women screened for depression by six-months postnatal.

Child Development

Increase or maintain the percentage of children screened with the ASQ-3 by six-months postnatal.

Prenatal Care

Increase or maintain the percentage of women who receive their first prenatal care visit after enrolling in home visiting services.



Domestic Violence Screening

Increase or maintain the percentage of women screened for domestic violence by six-months postnatal.

Photo by ghetto_guera29

Referrals for Alcohol Use

Increase or maintain the percentage of women who receive a referral within six months of screening positive for alcohol use/abuse at intake.

Parent/Child Relationship

Increase or maintain the percentage of parents screened with the HFPI, DANCE, HOME or SHIF by 12-months postnatal.

Photo by Stephen Hochhaus

Inter-Birth Interval

Increase or maintain the percentage of women provided with information about birth spacing or who report using birth control by six-months postnatal

Activity

What are the objectives? What is your program try to achieve with children/families/clients?

What does your program measure?

How do you collect data for these objectives?

Standardized data collection tools with research and literature that shows the tool is valid and reliable?

OR

Make up questions to collect the data needed?

Activity

Discuss the performance measures/objectives you wrote down with your group.

As a group, select two objectives.

Activity

For each objective selected, write a common performance measure that everyone in the group agrees upon.

Keep in mind:

- When is data collected?
- How is data collected?
- What tools are used to collect data?
- What questions are asked?

Thank You
